Injecting Collection

Collections are also allowed as values to be injected

Syntax to use list element in spring configuration file
```
<property name = "property name">
  <list><value>property value</value></list>
</property>
```

Auto Wiring:

If spring container is automatically taking other bean class configuration based objects as dependent values for bean class properties then it is called auto wiring

```
<bean id = "id" class = "pojo class name" autowire="byName"/>
```
